

Bat Call Analysis

Introduction

This one-day classroom-based course focuses on the analysis of bat calls recorded on full spectrum, broadband time expansion or frequency division bat detectors.

Use of AnalookW, Anabat Insight (Titley), Bat Explorer (Elekon) and Kaleidoscope (Wildlife Acoustics) software packages is covered, though the illustrated identification features will apply to other sound analysis software.

You will need to bring your own laptop with software packages pre-installed.

Course content

- Principles of sound analysis
- Getting good recordings
- Identification of UK species from calls
- Bat social calls and non-bat sounds
- Practical sessions in using the different software packages
- Analysis of data and reporting

Where?

The course is held at our main office, just outside of Exeter.

How to book

Please email office@richardgreenecology.co.uk for a booking form.
