

An introduction to the National Vegetation Classification (NVC) as applied to lowland grassland

A one-day introductory course to the NVC protocol, survey, data analysis and presentation.

The course will involve field visits and classroom sessions on survey planning and method, data presentation and analysis.

Participants should be familiar with the scientific names of a range of common grasses and herbs.

Participants need to bring a copy of "British Plant Communities, Volume 3, Grasslands and Montane Communities" Ed. J.S. Rodwell published by Cambridge University Press. ISBN: 9780521627191.

Grass communities on contrasting soil types will be visited.

Attendees must be fit and able to walk across rough terrain, and bring appropriate outdoor clothing and footwear.

A course certificate will be issued following completion.
